

Teflon Wear Band Tape

Wearband strip is supplied in 2 materials: 40% bronze-filled teflon and phenolic. Phenolic strip is supplied by the foot in coils and the teflon strip is supplied by the inch in roll form.

Nothing less than 40% bronze-filled teflon should be used for heavy-duty hydraulic applications.

Lightly filled teflons are fine for light duty pneumatic applications. Phenolic strip offers excellent compressive strength, but may be harder to form in some applications. 40% bronze filled teflon strip will form to any size easily and can be skive-cut to almost any width and thickness. For full rolls or coils, call sales for pricing, availability and length.
