

# T DUO H Piston Cups

These spring-energized T DUO H style piston cups are designed to handle higher system pressures than non-energized cups. They are perfect for low pressure hydraulic applications. Due to the steel center, they can be bolted directly to the rod, no piston is needed.

Temperature: -20 to 212F

Pressure: 0 to 580 PSI

Double Acting Piston Cups

Part Number	Bore Size D	Hole d2	Lip Height	d1	Base L2	Price
