# Thousands of Replacement Seal Kits in Stock

Since 1972, Allegheny York has made it our business to help our customers focus on their business. Our seal kit products will keep your equipment maintenance cost lower without the worry of lost performance.

Designed to handle the demands of high heat, speed, friction and pressure, our seal kit products are field tested to ensure the consistent operation of your essential equipment.

## THE DIFFERENCE BETWEEN OEM AND AFTERMARKET KITS

“Aftermarket” and “low quality” have come to mean a similar thing in the minds of many. While some aftermarket parts are economically made and low quality, that certainly doesn’t fit them all. It’s vital to discover an aftermarket provider that you trust to get you the best quality aftermarket parts available.

## OEM VS. AFTERMARKET PRICE

The biggest contrast among OEM and aftermarket parts is the cost. Like every huge brand in any industry, OEMs will charge considerably more than their “non-brand name” rivals. They can escape with it in light of the fact that their name is so generally known.

But what are you really getting for the additional expense? There’s usually next to no distinction between the OEM and aftermarket parts. All things considered, you’re simply paying for the name. At Allegheny York, our kits are up to 30% - 50% off the OEM costs, for the equivalent or better quality.

## OEM VS. AFTERMARKET QUALITY

At AY, we will just provide you quality parts from manufacturers we trust. If we realize a specific supplier experiences difficulty with parts, we won’t sell you their parts. With our many years of experience and expertise we’ve discovered suppliers that consistently deliver great quality parts.

It’s easy to make sure you’re getting all the components you need. Contact one of our engineers at (717) 266-6617 or [Sales@AlleghenyYork.com](mailto:Sales@AlleghenyYork.com)
